SUMMARY

A Software Engineering Team Lead with 7 years of experience (4 years front-end, 3 years back-end) building internal business systems and e-commerce apps. I've also taken a few products from "just an idea" to a working app on my own > UI/UX, development, and delivery. I also look after the SanayaTechs website and its SEO as we keep growing. Currently, I lead the team at SanayaTechs working on Odoo standard and custom development. I'm involved in the full project cycle too: scoping, planning, and making sure what we build actually matches the business needs. I've worn a marketing/content hat as well, organizing content pipelines, making sure posts are ready to publish, and recording training content myself. I've shared Odoo courses and documentation publicly, and I've done R&D work to learn from strong services abroad and apply the best ideas in a way that fits our market. I work well in Agile/DevOps-style teams using Jira and Microsoft Teams. What I'm best at is taking detailed requirements, simplifying them into a clear plan, and delivering B2B solutions that make teams faster and more efficient.

EXPERIENCE

Software Engineering Team Lead 02/2026 - Present

Al-Sanaya Al-Arabia For Data Center and IT Solutions ↗

- I lead a small team delivering Odoo standard and custom solutions. That means setting the technical direction, breaking down scope into clear tasks, reviewing code, and making sure we ship on time without sacrificing quality.
- I'm hands-on when needed solution design, integrations, reports, automations, and troubleshooting while also owning the delivery side: estimating effort, planning milestones, managing priorities, and keeping stakeholders aligned.
- I'm involved in the full project cycle too: scoping, planning, and making sure what we build actually matches the business needs.
- I've worn a marketing/content hat as well, organizing content pipelines, making sure posts are ready to publish, and recording training content myself. I've shared Odoo courses and documentation publicly, and I've done R&D work to learn from strong services abroad and apply the best ideas in a way that fits our market.

Software Engineer (Promoted) 11/2024 - 02/2026

Al-Sanaya Al-Arabia For Data Center and IT Solutions ↗

- Developed the company's website with a dynamic one-page scroll, a video landing section, and interactive components tailored to maximize client engagement.
- Built Odoo-based systems as a technical consultant for clients across different sectors, customized to their operations and automating complex workflows.
- Collaborated with internal teams to structure content-rich sections that align with Sanaya's business model and service offerings.
- Contributed to marketing through voiceovers, screen recordings, and digital product showcases to support sales and outreach.
- Currently leading the development of a digital archiving system and a hosting platform to expand Sanaya's portfolio of tech services.

Research & Innovation Specialist / Project Manager 08/2024 - 08/2025

Axux Inc. (Aximus Techs LLC – Subsidiary) ↗

- Leading research and innovation efforts across Axux Inc. and its subsidiaries, including Aximus Techs and Sticka.io.
- Spearheading new technology exploration, AI integrations, and automation strategies to support internal product development and client projects.
- Actively manage product strategy and roadmaps for ongoing ventures such as Sticka.io, aligning development goals with

- market needs and user behavior.
- Guide MVP planning, product discovery, and go-to-market execution in collaboration with cross-functional teams.
- Facilitate agile development practices using JIRA, Notion, and Azure to coordinate teams, prioritize tasks, and ensure timely delivery.
- Bridge research insights with actionable implementation, prototyping innovative features and validating feasibility across the stack.
- Continue to provide project oversight within Aximus Techs, ensuring that both strategic and technical execution remain aligned with broader company goals.

Software Engineer & IT Field Technician

01/2024 - 04/2024

Building Research Center - Ministry of Building & Housing ↗

- Developed and maintained software applications to support the ministry's operations and improve efficiency.
- Collaborated with cross-functional teams to implement IT solutions tailored to governmental requirements.
- Conducted system analysis and troubleshooting to ensure optimal performance and security of applications.
- Designed and implemented databases for managing sensitive data, ensuring compliance with governmental standards.
- Assisted in integrating automation tools to streamline administrative processes and reduce manual workloads.
- Provided technical support and training for end-users, ensuring seamless adoption of new systems.
- Contributed to cybersecurity measures, protecting critical data and infrastructure from vulnerabilities.

Co-Founder & Software Engineer

10/2024 -

Metaspace Inc. ↗

- Co-founded and currently lead Metaspace Inc., a software and IT solutions company focused on building scalable digital products and infrastructure.
- Designed and developed full-stack web and mobile applications with strong focus on performance, security, and clean architecture.
- Built backend systems using .NET, Go, and Python—implementing REST APIs, microservices, and optimized database structures.
- Migrated infrastructure from AWS Amplify to a custom .NET-based environment, reducing costs and improving scalability.
- Set up CI/CD pipelines, containerized deployments, and cloud automation to streamline DevOps workflows.
- Led UI/UX development and frontend integration to ensure intuitive, polished user experiences.
- Implemented strong cybersecurity practices to safeguard user data and system integrity.
- Managed a small team of engineers and DevOps specialists, improving collaboration through Azure, Jira, and GitHub Actions.
- Drafted and standardized NDAs and client agreements to protect intellectual property and streamline onboarding.
- Defined product strategies and roadmaps, guiding successful launches across several in-house and client-based projects.

EDUCATION

Technology & Operations Management ↗
